SOLARSPEED AVANTIS

Ultra-light mounting frame with minimal ballast

- Minimal weight, maximum weight distribution – load is spread across a larger surface
- Works on all flat roofs, even those with limited load-bearing capacity

Fast to install, simple to master

- Quick installation with pre-assembled components
- Swift module placement with low hinge design
- Intuitive workflow feels natural in no time – even for first-timers
- Step-by-step video tutorials and assembly instructions to guide every move

Smart design for XXL modules

- Fits a large range of different module sizes
- Compensates for slight roof imperfections
- Open structure for optimal module cooling, maximizing energy production

Future-proof safety

- Superior lightning protection
- No roof penetrations, eliminating risk of leaks
- Safe walkways thanks to efficient cable and ballast management
