

Ramming Piles

A simple, cost-effective, and efficient solution

Magnelis® driven piles are driven directly into the ground using a pile driver, without earthworks, excavation, or concrete. Available in several thicknesses to suit soil aggressiveness, they offer a fast, clean, and particularly economical foundation solution.

Advantages

- ✓ Easy and quick installation, saving time and money.
- ✓ In-house production of piles, ensuring controlled pricing, optimal responsiveness, and reduced lead times.
- ✓ High load-bearing capacity, reducing the number of foundations required.
- ✓ Possibility of monopile structures, further limiting the number of foundations.
- ✓ No excavation or concrete, therefore no impact on soil permeability.

Options

Depending on the loads to be supported, various profiles are available, ranging from C-Profile 80×50 to 160×80.
