

IDEEMATEC achieves 10-Gigawatt Milestone

Agri-PV is the global Growth motor

Wallerfing, June 23, 2026 – Just in time for Intersolar Europe, IDEEMATEC reaches a key milestone in its company history: with more than 10 gigawatts of installed and contracted tracker capacity worldwide, projects in over 30 countries, and six international offices – including Saudi Arabia – the company continues on its dynamic growth path. A key driver: the rapidly increasing adoption of agrivoltaic (Agri-PV) solutions.

Agri-PV as a central growth engine

Since the beginning of 2024, IDEEMATEC has deployed around 625 MWp of Agri-PV trackers. The foundation of this growth is the L:TEC® platform, which serves as the technological DNA uniting all IDEEMATEC tracker types—1P, 2P, and Agri-PV trackers. This enables a wide range of applications to be implemented on a shared system architecture.

One platform for every challenge

The decisive factor is the consistent focus on adaptability. The systems are designed for terrain following, slopes of up to 36 percent, and a high degree of prefabrication. Through pre-assembly concepts with around 30 percent fewer individual components,

IDEEMATEC significantly reduces installation effort and complexity on-site. The result of this consistent product development: robust tracker solutions for demanding locations.

Dr. Tobias Bischof-Niemz, CEO of IDEEMATEC: *"The strong momentum we have built with innovative tracker solutions for almost all application scenarios provides the perfect foundation for the next phase of growth. The solar field is evolving into the power plant of the future, where trackers play a key role."*

IDEEMATEC Live at Intersolar Europe 2026

At Intersolar Europe 2026, IDEEMATEC will showcase its 1P, 2P, and Agri-PV trackers, including tractor and agricultural machinery, live in the outdoor exhibition area. Visitors are warmly invited to meet the IDEEMATEC team at booth A6.260 and experience the systems and their applications in utility-scale and Agri-PV projects first-hand.

###

About IDEEMATEC

IDEEMATEC is a leading global provider of single-axis solar trackers for large-scale and Agri-PV projects. The fully modular L:TEC® tracker portfolio is based on a unified platform that offers three distinct trackers: the L:TEC® 1P, L:TEC® 2P, and L:TEC® Agri-2P, each tailored for specific applications and project landscape requirements.

With more than 10 GW of installed tracker capacity worldwide and headquarters in Germany, IDEEMATEC has been a trusted partner for developers, EPCs, and investors since 2003. Its presence across five continents ensures strong local support and reliable project execution across international markets. IDEEMATEC ranks among the top 10 tracker suppliers in the world and is the only German company in this group. The company has also delivered the world's largest 2P solar park in the MENA region and holds more than 80 patents, underlining its solid innovation track record.
